

## EFRAT NETWORKS: RESIDENTIAL PROJECTS AND SERVICES

Efrat Networks has 15 years of experience in planning, installing and maintaining an array of systems in high-end residences throughout Israel, using cutting edge technologies and installation standards. Our primary objectives for our clients are ease of use and zero downtime.

We work closely with our clients and their team of architects, interior designers, construction managers and electricians, to create a true sense of home and comfort, without interfering with the design and often complementing it with elements such as custom designed wall switches and touch panels.

We are experts in:

**WIFI & Network** – The network is the most critical underlying element that allows all other systems today to function properly. We install and manage reliable internet connections and secure, consistent and stable WIFI coverage for both entertainment and business use.

**Security** – This includes alarm, camera and intercom systems that can be securely accessed and managed from multiple devices and by multiple individuals.

**Flood Detection** – Efrat Networks developed a flood control system, EFN Flood ProTec. Upon detection of flooding, the system immediately turns off the main water valve and then notifies the homeowner or property manager. We already know that our system has saved several homes from significant water damage.

**Smart Control** – Beautiful and functional smart control solutions that cover lighting, blinds, air conditioning, under-floor heating, home audio and video systems and much more.

**Audio and Video** – Great video and audio entertainment systems and multi-zone audio solutions.

**Range of Managed Services** – Long after the installations of our systems are completed, Efrat Networks continues to work with our clients, providing them with monthly managed services.

Families come to Israel with multiple devices, such as laptops, tablets and smart phones, all needing to work wirelessly, without interruption. The parents need to continue working as if they haven't left their offices, and the children all want to watch their favorite programs. This very common scenario requires Efrat Networks' managed solution for connectivity and telecommunications. Efrat Networks takes the responsibility of installing and maintaining internet and local cable TV services, so our clients do not need to deal with the various service providers during their visits to Israel. We also provide access to geo-restricted content through our EFN MediaPlay service, so our clients can access media content on the internet from the US or Europe, which is usually blocked in Israel.

**Call Efrat Networks today to find out more about our services and systems.**
